Why does the government feel the need to step in and help out private business compete against XM Radio concerning the instant weather and traffic reports. I now know and feel safer going from city to city on where to go on my XM radio to find out these conditions and can know miles in advance so that I might plan my trip in and around these cities. Before XM Radio I would have to fumble around the dial hopping to catch a report, usually, 15 min. apart, taking my eyes off the road. I pay for this service thru a monthly subscription, it is none of the NBA's business what is programmed on XM Radio, heck I thought this was America and the people ruled, not the special interest groups.

Did the NBA mess with CATV and the Weather Channel. That is instant weather on demand. The NBA complained about every advance in any form of Communication, ie TV, FM and other advancements.

Lets keep America Free and open to Free Enterprise.

Thank you for letting me vent.
